FAQ

A: What should I do if I encounter vbs errors or fail to bind the window after starting with error codes -25 or -26?

Q: Make sure to disable the firewall or turn off the antivirus software, then restart the computer and try again. The simplest solution would be to download and install the free version of Huorong from their official website at https://www.huorong.cn/. After installation, restart the computer and then run our software.

A: How do English systems use our software?

Q: The Settings of the computer need to change three: the format and locale language must be changed to simplified (missing one item is not possible);

A: What should I do if I encounter a blue screen?

Q: 1：Disable the built-in hyper-V function of the system.；

2：After restarting the computer and successfully accessing the desktop, restart the computer again. Then, register and activate the software before launching the game. (Blue screen issues are usually caused by system driver compatibility problems. We recommend installing the operating system suggested in the http://bfgho.com/xz/10pro/403.html 's recommended operating system link.)

A: How can I fix the issue of not being able to open the interface in a traditional Chinese operating system?

Q: You need to change three settings on your computer: format, region, and language. Change them all to Simplified Chinese. It is essential to have all three settings changed.

A: Why am I getting a "registration failed, please check your internet connection" message?

Q: Usually, this happens when you try to use a registration code meant for the single version with the dual version or vice versa.

A: After reopening the software, it shows that it is already bound to another computer. What should I do?

Q: This usually happens when another software interferes with the machine code, causing the previous registration machine code to be abnormal. If you are sure that it is being used on the same computer, please contact customer service for unbinding. After restarting the computer, activate this software with the registration code first before opening any other software.

A: Even though I have disabled the firewall and uninstalled the antivirus, I still get error codes -25 and -26. What should I do?

Q: In that case, try installing 360 security guards. After installation, run our software and promptly allow any interception prompts from 360. If the error still persists after pressing the launch hotkey for the game, restart the computer. Generally, this should resolve the issue.

A: Why does the game feel laggy during AFK farming?

Q: Increase the background frame rate in the game's graphics settings, and you can try setting it to 60 frames per second.

A: How can I run multiple instances of the game?

Q: You need to use the dual version. Set up the account and password in the auto-login interface, and uncheck the option of saving account and password for Blizzard Battle.net. Then use the auto-login feature to log in.

A: How can I individually stop one window while running multiple instances?

Q: In the AFK status interface, click "Stop" next to the specific window to stop it. To start a particular game window, switch to that game window and press F10 to start.

A: Why are the loot settings options empty on the interface?

Q: Try deleting the D4_Pickup.ini file in the C drive, then reopen our software.

A: Why do my skills not deal damage when using them on monsters?

Q: You need to increase the release speed of basic/core skills in the skill settings interface.

A: Can I only run the same game mode when using multiple instances?
Q: You can add the first account and select the desired dungeon in the settings of one instance, then save the settings and start it. Then add the second account and select a different dungeon, save the settings, and start it. Alternatively, you can create configurations in the multi-configuration interface, matching the character's name with the respective configuration, allowing you to launch specific configurations regardless of the settings on the interface.

A: How do I farm Nightmare?
Q: Engage one monster in any Nightmare dungeon, start the script, and it will automatically farm the selected dungeon.

A: How can I enter the Sacred Glacier?
Q: You need to complete a prerequisite mission near the teleportation point in the Bear Tribe Refuge. After completing the mission, you can enter the Sacred Refuge. For specific details, you can search online.

A: What should I do if running multiple instances feels laggy?
Q: In the game's graphics settings, set all adjustable options to their lowest and disable any possible visual quality options, especially the resolution percentage, which should be set to the lowest. Close the game client completely and log in again.

A: Why does the script pause after walking one step in the game?
Q: It is highly likely that your computer's antivirus firewall is causing the script to run very slowly. The simplest and most convenient solution is to download and install the free personal version of Huorong from their official website at https://www.huorong.cn/. After installation, restart the computer and then run our software.

A: Does unbinding consume usage time?
Q: Unbinding does not consume any usage time. You can safely change machines.
